

Table 22. Current characteristics (continued)

Symbol	Ratings	Max	Unit
$I_{\text{INJ(PIN)}}^{(1)(2)}$	Injected current on a FT_xx pin	-5 / NA	mA
$\sum I_{\text{INJ(PIN)}}$	Total injected current (sum of all I/Os and control pins) ⁽³⁾	-25	mA

1. Positive injection is not possible on these I/Os and does not occur for input voltages lower than the specified maximum value.
2. A positive injection is induced by $V_{\text{IN}} > V_{\text{DDIOx}}$ while a negative injection is induced by $V_{\text{IN}} < V_{\text{SS}}$. $I_{\text{INJ(PIN)}}$ must never be exceeded. Refer also to [Table 21: Voltage characteristics](#) for the maximum allowed input voltage values.
3. When several inputs are submitted to a current injection, the maximum $\sum |I_{\text{INJ(PIN)}}|$ is the absolute sum of the negative injected currents (instantaneous values).

Table 23. Thermal characteristics

Symbol	Ratings	Value	Unit
T_{STG}	Storage temperature range	-65 to +150	°C
T_{J}	Maximum junction temperature	130	°C
