1. Tested in production.
2. Frequencies above the supported product's maximum frequency can only be used once divided through PSIK or PSIDIV4 dividers.
3. Specified by design - Not tested in production.
4. Evaluated by characterization - Not tested in production.
5. The supply regulation consumption is common to HSI and PSI. (To be counted once if both oscillators are ON)
6. Jitter measurements are performed without clock source activated in parallel. The typical value refer to the standard deviation, while the maximum is the peak measurement of TIE-8 over 36 cycles.
7. Jitter measurements are performed without clock source activated in parallel. The typical value refer to the standard deviation, while the maximum is the peak measurement of TIE-16 over 36 cycles.
